

REMARKS

Support for Amendment to Specification and Sequence Listing

The specification is amended to incorporate the substitute sequence listing by reference. This substitute sequence listing replaces the CRF and paper copy of the prior filed sequence listing. Applicants have enclosed a substitute sequence listing on both CRF and on CD-R in lieu of the paper copy, and request its entry in the specification, in place of the previously filed sequence listing.

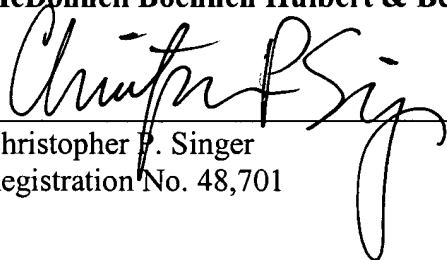

The substitute sequence listing corrects the errors described in the Error Summary provided by the Office. Specifically, all sequences disclosing a “t,” or an “n” that stands for “t,” have been modified to be of type “DNA” and the RNA bases identified by the “misc_feature” key. This substitute sequence listing adds no new matter to the application.

As required by 37 C.F.R. §§ 1.821-1.825, the CRF copy and the duplicate CD-R copies (in lieu of paper copy) of the substitute sequence listing are identical in content.

Respectfully submitted,
McDonnell Boehnen Hulbert & Berghoff LLP
